The above-mentioned features of MLM software from us will be scheduled as per your requirement understood and allowed to customize or add any other features as per the Requirement based on Business model requirements or as per the business practice chosen by the Client. However, if any new kind of feature is in need to

develop the logic at our end, the client should allow us the required time duration for the same.

ANNEXURE-3

OPTIONAL MODULES & FEATURES LIST

E-Wallet System

E-wallet is an online medium holding the information and history of money transactions assuring safety and security to the users. In the case of an MLM Software, E-wallet has the role of a virtual account where the member can make transactions with the amount available. The Amount deducted from the payouts can be transferred to E-wallet. Some amount of the Net payouts can be transferred to E-Wallet. (Option is given to the members) By using the E-Wallet Amount can be utilized for purchasing the E-Pin and Products.

Self Replicating System

Member who joins your company will receive their own personalized self-replicating website, with a static, search engine friendly URL. You can check the replicating site Our Infinite MLM Software, supports virtually any website, and can be easily managed through the MLM Software's Admin Control Panel.

- Multiple self-replicating website
- Easily managed through the server
- Uses no disk space on your server

E.g.: <http://www.domain.com/username> is the replicated URL.

Web design / Static & CMS

The Infinite mlm software provides stunning webdesigns with mlm software using the most modern technologies. We provide you the most suitable design for your business

E-commerce Software

Infinite MLM Software is Integrated, "customizable web-based online shopping cart solutions" for companies of all sizes, on an "easy-to-learn and manage", Web-based platform. The MLM user can purchase the product by using online shopping cart solutions. E-commerce Software is essential for MLM Business in the case of purchases. Most of the companies use an E-Commerce Software for the same reason and even for affiliate marketing product promotions they use E-commerce applications. And further, all the E-Commerce purchase order goes to Infinite Inventory; which is an application developed to manage later processes. Submodules of Infinite E-commerce Software include,

- Shopping Cart
- Product Categories
- Product Sub Categories
- Product Editor
- Member's Login
- Reports

Support / Ticket System

Support systems are an integral part of every business and business software. Effective communication between the service provider and customers is the backbone of every good business. Ergo, we provide a high-end support system to our customer as an add-on facility in our MLM software. Our support system is included with ticket system so that the customers can get a solution to their issues based on ticket priority.

Payment Gateway

The user can purchase the product using their credit card/debit card. So the Merchant should take a payment gateway account. The transaction includes buying new products, Bonus, Online Registration, and Online Purchase, Signing Up New Members, Package Up-gradation, and Member Renewals. The client should provide the API, we will only do the integration. Below is the list of Payment Gateways which are can be associated with Infinite MLM Software.

- Paypal
- CyberSource
- iPayout
- ePDQ -Barclaycard
- Authorize.net
- Pay Fast
- Total-Apps
- CCAvenue
- First Data
- Liberty Reserve
- EBS (E-Billing Solutions)
- NMI (Network Merchants Inc.)

- Solid Trust Pay
- Blockchain
- bitgo

SMS Menu (Fully Integrated Facility)

The system is able to send automated SMS to the user's mobile on various actions & activities to update the user on his gains & transactions. We have our own 100% reliable gateway (infinitesms.in) for SMS, which is currently available to Indian clients. For Clients outside India, we can integrate with other International SMS Gateways or 3rd party SMS service providers. The software includes the following option to send the SMS.

- SMS to newly enrolled user – a welcome message
- SMS to the Sponsor of new enrollment to congratulate him
- SMS when payout all the payout receivers
- SMS on shopping Transactions
- Send SMS by Selecting Starting ID and Ending ID.

However, you may specify any other occasions / actions where you need this SMS Alert integration as per your requirement. All the SMS message text matters to be prescribed by the client within the limit of SMS one single unit as 160 Characters. The sender ID for all the SMS sending out from the system should be a choice of the client.

SMS Delivery Limitation

The Automated / integrated shooting of SMS from the web application on various occasions are only an add-on facility provided. The Delivery of SMS purely depends on the gateway efficiency configured in the system, Operators compatibility and Internet services availability. Our Limitations will be up to error free gateway integration and tracking / keeping log records.

Employee / Privileged user

This module allows the company to add their employees with certain privilege or tasks. You can set tasks in specific for different employees. Later, an employee can check their assigned tasks and can work in progress according to that.

- Register Employee
- Employee Login
- Add Employee
- Edit Employee
- Delete Employee

Auto Responder

An auto responder is an internet marketing method. People use an autoresponder to capture names and email addresses of potential clients. It's usually a system designed on internet, which might either be a service to subscribe to or might be something used as an alternate storage. Many people are still working too many hours trying to get their new business off the ground. Instead, you should be concentrating on how you can handle more leads and work less. The way to achieve this is by using our MLM software

Multi-currency

Multi currency is an additional feature provided by the infinite MLM Software. The multi-currency integration in the Network Marketing Software is comprehensive and it has an entire set of features to provide powerful & comprehensive purchasing, sales and accounting functions .

Multi-currency is the feature allowing you to do business of the same product in various currencies. The only thing you should take care is that the product should have the same name in the local language as well as in English. The multi-currency option allows you to do your business in the currency you familiar with, i.e, your native currency.

Multi-lingual System

This a smart feature provided by Infinite MLM software will give you the comfort of interaction with the software with a different language of your wish. We will help you to use our software in your own language, thus making your business easier.

We are ready to provide multilingual support for our MLM Software pack with any language of your choice. We are already providing language support in English, Français, Deutsch, Italiano and Español.

Infinite MLM Mobile App

Overgrown Smartphone usage of general public enforces MLM companies to shift perspective towards MLM Mobile apps. Technology-driven development in the behavior of customers and prospects foster to make efforts to improve user experience, reliability, and reputation through MLM software mobile apps. MLM Mobile application allows the users to manage their profile through mobile or tablet and provides updated information on commission and compensations and thereby, consequently subdue the burden of using desktop computers

Lead Capture Page

MLM Lead Capture Page or MLM Lead Generation System is a landing page in MLM Software separated by a lead capture form that allows you to collect leads having the information of the customers (usually email-id). Lead Capture Page is also known as Squeeze Page. The page appears when you click on an online ad or an optimized search result. Lead capture page lets people know how easily they can get around your product or offer and also provides with more information on what you are in search of. Lead Capture is an essential for making sales. With the well developed MLM Lead Capture Page, you are going to bring your MLM business at its peak.

CRM for MLM

CRM for MLM or Network Marketing is now trending to lead you throughout the several processes associated with owning a Multi Level Marketing business. Customer Relationship Management (CRM) Software is the comprehensive variety of applications that maintain customer data. MLM companies used to integrate CRM with MLM Software to manage and analyze customer interactions with the Network Marketing business. The best CRM for MLM is that provides automated sales and marketing approaches in Network Marketing business. Network Marketing CRM keeps track on the business goal, customer service, and support.

Optimized with all devices

Infinite MLM Software is designed with, exploitation Responsive internet style approach. It mechanically optimizes the page for any device, be it smartphones, tablets, desktops and OS platforms like android, IOS, windows etc.

Payout Release

This module can be referred to as the payout method carried out on a fixed schedule which can be processed from either E-wallet or via default process.

- E-wallet Payout Request (Payout Release from E-wallet Balance)
- Default payout Release

- **Blog**

The MLM user can create their own personalized blog for posting the MLM details and comment to the post.

Example: blog.infinitemlmsoftware.com

And more, Above-mentioned features of MLM software from us are scheduled as per your requirement understood and also allowed to customize or add any other features as per the Requirement based on Business model requirements or as per the business practice which is chosen by the Client. However, if any new kind of feature is in need to develop the logic at our end, the client should allow us the required time duration for the same.

ANNEXURE - 4 - INFINITE MLM SOFTWARE DEMO

You can read more about each MLM Plan by visiting the following link:

<https://infinitemlmsoftware.com/mlm-plans.php>

Apart from the above listed Compensation Plans, we are keen to develop MLM Software as per client requirements and we can also blend or combine the compensation plan if they needed.

ANNEXURE – 6 –

OPTIONAL OUTSOURCING RESOURCE

SMS Gateway

The web-based software application that we are offering is also having an integrated facility to deliver SMS to the users on various prescribed facilities. To enable this facility the system needs a URL based API function of a best servicing gateway with all required provisions like the delivery report, export & import of reports in the gateway software. The API will be integrated in three places like sign-up notification, Payout notification, and Password notification.

Now this Gateway you need to arrange from your end so that we will be integrating into the software application. For operations in India, we can have the facility to provide you this SMS gateway ourselves, but we have access to deliver in your country. You may find a good gateway service provider and let us know the API to integrate into your software (e.g.: www.celltrust.com)

Payment Gateways

Our taxi system is capable of seamless integration with any payment gateway API of your choice. You need to provide us the few samples / testing card data useful while integrating & trial transactions. However, our service involvement in this process is limited to show you the secured URL exchange of positive & negative signals with the gateway website & our website database. We will not be account for the complications and error from the third party (bank and payment gateway) that is none other than our software issue. We also have some recommended payment gateways for taxi systems (e.g.: www.authorize.net)

Hosting Server

The Operating System used here is a Linux based. We provide different kinds of servers, the shared server, VPS, Cloud server, etc. Apache is the most commonly used web server for developing purpose. The server can also be purchased from a third party and the software can be installed.

ANNEXURE – 7 –

DEVELOPMENT PROCESS FLOW & DELIVERY SCHEDULE

Upon confirmation of the Annexure – 4, the list of Features & Modules required to be developed and delivered finalization also understanding the priorities, the development process flow will be of 5 phases:

PHASE 1:

After finalizing a project by a Sales Consultant, Software Requirements will be gathered by a Business Analyst. After studying all the requirements & customization for the software, the total cost will be estimated and an official quotation will be sent to the client. To start the work, the client should approve the quotation and pay an initial amount. The initial amount depends on the total estimated cost for the software. Also, the client will be asked for the estimated date of software launch and based on the date the software development time is scheduled.

PHASE 2:

The development of the software starts in this phase. Preparation of the complete new software (including mobile app) with new design of client's choice along with the software for enrollment process, admin & user dashboards, and other will be performed. The client can oversee the development of the software as we provide a software demo in this phase. The client can have a complete track of the development process thereby. As Client Satisfaction is the primary focus of this phase, he/she can suggest any modifications in the demo. If the client has any existing software with the users with a prearranged schedule, all the required data from the old software database will be extracted and migrated to the new software. This phase of work requires minimum 4 weeks and the software is ready for a quality testing

PHASE 3:

The completed ready-to-launch-software is now submitted to the Quality Assurance(QA) Team for testing. The QA team tests the total functionality of the software. Once approved by the QA team, the software is ready to launch. We also provide the client an initial training of the software, if needed. This phase requires 3-4 days.

PHASE 4:

This phase includes the software launch. The new software is available for public now. A team of developers will be available for coordinating the software functionality and to provide any updates/customization/Report building etc., if needed. Thereby enabling the client smoothest ride on the day to day business operations. This phase of work requires 7 – 10 days of time to complete and have the completion of scheduled work.

PHASE 5:

Technical support will be available during local business hours. In the case of any technical necessity after business hours, Team of sales & assistance will be

available 24 x 6, to convey your assistance request to concerned technical personals. And, will fix the issue at the earliest.

ANNEXURE - 8 -

TECHNICAL ENVIRONMENT & WEB REQUIREMENTS

Mobile App OS Compatibility:

- Android
- iOS

Software Specifications

- **Front End**
 - Code Igniter
 - HTMLM
- **Back End**
 - Code Igniter
 - PHP
 - AJAX
 - MySQL

Server Requirement:

Client has to facilitate Linux hosting server with following Specifications

- Apache web Server
- MySQL database with MySQLi enabled
- PHP
- Mod_rewrite enabled
- ionCube encoder

Testing Methods Applicable

The testing methods will be manual, post to the development of each module / feature / facility and pre-stage to the release on the live server. On your approval, we will plug in the same to the live domain. This procedure will avoid any breakdown in the application running. However, if you feel some another testing method is required, you may suggest before we start working on this project. We request you to kindly depute a qualified decision maker, as well as a subject is well known to our complete business plan & process to engage in this testing activity. This will help both sides for accurate testing & early release of each update.

ANNEXURE - 9 - COMMERCIAL PROPOSAL

The commercial proposal & payments plan along with the terms & conditions are as per below:
